

Numerical software 1

Introduction

Vít Dolejší

Charles University Prague, Faculty of Mathematics and Physics

Lecture 1

- lecture, on Friday at 9:00
- tutorial, on Friday at 10:40

Style of the lecture

- **lecture notes** are available at
`msekce.karlin.mff.cuni.cz/~dolejsi/Vyuka/NS2018.html`
together with other sources
- **plan for each week** at
`msekce.karlin.mff.cuni.cz/~dolejsi/Vyuka/NumSoft_25_ZS.html`
- **lectures**: presentations by the teacher, questions are warmly welcome
- **tutorials**: learning and solution of several tasks under the supervision of the teacher

The aim of these courses

- this lecture fill a gap in lectures given at our faculty
- implementation of numerical methods is also a non-trivial task
- we need **efficiency**, **accuracy** and **robustness**
- important aspect is an **adaptation**
- it is advantageous to use software libraries (subroutines written in Fortran, C++, etc.)
- we learn
 - to **understand** the basic principles of numerical software
 - to **use** public software for basic tasks
 - to **employ** public software for your own project
- a practical introduction to more advanced numerical methods
- role of **tutorials**: students will solve several **Exercises** and two **Main tasks**

General aims

- passive learning of **linux** and **fortran** – very frequently used in scientific computations
- solution of simple problems demonstrating the given subject
- **basic level**: using the pre-prepared code by me
- **middle level**: a minor modification of the given code (with my interaction)
- **advanced level**: a major modification of the given code – optional

First step – installation of linux

- either: complete installation
- or: more easier using of **virtual box**, see `msekce.karlin.mff.cuni.cz/~dolejsi/Vyuka/tutorial1_linux.pdf`
- requires a downloading of large files

Temporary page!

$\text{\LaTeX}$ was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it. If you rerun the document (without altering it) this surplus page will go away, because $\text{\LaTeX}$ now knows how many pages to expect for this document.
